## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6, 10-16, 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Tang (6,476,671).

Regarding claims 1-4, 11-14, Tang (Fig. 2a) discloses an amplifier with auto-zeroing and chopping comprising: amplifiers (A1, A2) can be read as chopping amplifier stages and chopping switches (S1-S24) respectively coupled to each amplifier input and output, wherein the chopping switches (S1-S24) of each stage are independently controlled by control circuit (10) which can be read as a master controller and its own independent chopping operation.

Regarding claims 5, 15, wherein control signals from control circuit (10) enable/disable amplifier stages (one stage ON, another OFF), see claim 1.

Regarding claims 6, 16, wherein the amplifier operated at low frequency, see Abstract.

Regarding claims 10, 20, wherein amplifiers (A1, A2) are coupled in parallel.

***Allowable Subject Matter***

Claims 7-9, 17-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 7-9, 17-19 call for, among others, each N number of chopping amplifier stages contributes  $1/N$  amount of an overall gain of the chopping amplifier.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Thomsen et al. (6,307,430); McCartney (6,380,801)) disclose amplifier having chopping.
